Office Action Summary

Application No.

09/713,389

Applicant(s)

GAVLIK ET AL.

Examiner

Hussein A El-chanti

Art Unit

2157

-- The MAILING DATE of this communication appears on the cover sheet with the correspondence address --

Period for Reply

A SHORTENED STATUTORY PERIOD FOR REPLY IS SET TO EXPIRE 3 MONTH(S) FROM THE MAILING DATE OF THIS COMMUNICATION.

- Extensions of time may be available under the provisions of 37 CFR 1.136(a). In no event, however, may a reply be timely filed after SIX (6) MONTHS from the mailing date of this communication.
- If the period for reply specified above is less than thirty (30) days, a reply within the statutory minimum of thirty (30) days will be considered timely.
- If NO period for reply is specified above, the maximum statutory period will apply and will expire SIX (6) MONTHS from the mailing date of this communication.
- Failure to reply within the set or extended period for reply will, by statute, cause the application to become ABANDONED (35 U.S.C. § 133). Any reply received by the Office later than three months after the mailing date of this communication, even if timely filed, may reduce any earned patent term adjustment. See 37 CFR 1.704(b).

Status

- 1) ☒ Responsive to communication(s) filed on 15 November 2000.
- 2a) ☐ This action is FINAL. 2b) ☒ This action is non-final.
- 3) ☐ Since this application is in condition for allowance except for formal matters, prosecution as to the merits is closed in accordance with the practice under *Ex parte Quayle*, 1935 C.D. 11, 453 O.G. 213.

Disposition of Claims

- 4) ☒ Claim(s) 1-23 is/are pending in the application.
- 4a) Of the above claim(s) _____ is/are withdrawn from consideration.
- 5) ☐ Claim(s) _____ is/are allowed.
- 6) ☒ Claim(s) 1-23 is/are rejected.
- 7) ☐ Claim(s) _____ is/are objected to.
- 8) ☐ Claim(s) _____ are subject to restriction and/or election requirement.

Application Papers

- 9) ☐ The specification is objected to by the Examiner.
- 10) ☐ The drawing(s) filed on _____ is/are: a) ☐ accepted or b) ☐ objected to by the Examiner.
Applicant may not request that any objection to the drawing(s) be held in abeyance. See 37 CFR 1.85(a).
Replacement drawing sheet(s) including the correction is required if the drawing(s) is objected to. See 37 CFR 1.121(d).
- 11) ☐ The oath or declaration is objected to by the Examiner. Note the attached Office Action or form PTO-152.

Priority under 35 U.S.C. § 119

- 12) ☐ Acknowledgment is made of a claim for foreign priority under 35 U.S.C. § 119(a)-(d) or (f).
- a) ☐ All b) ☐ Some * c) ☐ None of:
- ☐ Certified copies of the priority documents have been received.
 - ☐ Certified copies of the priority documents have been received in Application No. _____.
 - ☐ Copies of the certified copies of the priority documents have been received in this National Stage application from the International Bureau (PCT Rule 17.2(a)).

* See the attached detailed Office action for a list of the certified copies not received.

DETAILED ACTION

1. This action is responsive to application filed on Nov. 15, 2000. Claims 1-23 are pending examination.

Claim Rejections - 35 USC § 102

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

2. Claims 1-9 and 17 are rejected under 35 U.S.C. 102(b) as being anticipated by Rostoker et al., U.S. Patent No. 5,856,975 (referred to hereafter as Rostoker).

As to claim 1, Rostoker teaches an apparatus for controlling a physical layer interface of a network interface card, said apparatus comprising:

a read only memory (ROM) capable of storing an embedded control program (see col. 9 lines 31-40 and col. 28 lines 55-65);

a random access memory capable of storing a downloadable software control program (see col. 5 lines 1-5); and

a microcontroller capable of controlling said physical layer interface, wherein said microcontroller in a first operating mode executes said embedded control program to thereby control said physical layer interface, and wherein said microcontroller in a second operating mode is capable of downloading said downloadable software control program from an external processing system and executing said software control program in place of said embedded control program to thereby control said physical layer interface (see col. 4 lines 34-60 and col. 5 lines 1-5).

Art Unit: 2157

As to claim 2, Rostoker teaches the apparatus as set forth in Claim 1 wherein said ROM is an internal ROM in said microcontroller (see col. 12 lines 22-30).

As to claim 3, Rostoker teaches the apparatus as set forth in Claim 1 wherein said RAM is an internal RAM in said microcontroller (see col. 11 lines 43-51).

As to claim 4, Rostoker teaches the apparatus as set forth in Claim 1 wherein said ROM is an external ROM coupled to said microcontroller (see col. .

As to claim 5, Rostoker teaches the apparatus as set forth in Claim 1 wherein said RAM is an external RAM coupled to said microcontroller (see col. 11 lines 43-51).

As to claim 6, Rostoker teaches the apparatus as set forth in Claim 1 wherein said microcontroller downloads said downloadable software control program from said external processing system via a media independent clock (MDC) signal line and a media independent input/output (MDIO) signal line (see col. 8 lines 42-67).

As to claim 7, Rostoker teaches the apparatus as set forth in Claim 6 wherein said microcontroller downloads said downloadable software control program via a medium access control (MAC) layer interface coupling said external processing system and said physical layer interface (see col. 9 lines 1-12).

As to claim 8, Rostoker teaches the apparatus as set forth in Claim 1 wherein said microcontroller further comprises a plurality of control registers capable of controlling said first and second operating modes, wherein said microcontroller switches from said first operating mode to said second operating mode when said external processing system stores a jump address in said RAM in a first one of said plurality of control registers (see col. 28 lines 46-65 and col. 29 lines 54-col. 30 lines 8).

As to claim 9, Rostoker teaches a processing system comprising:

Art Unit: 2157

a data processor;

a hard disk drive capable of storing thereon a network interface card (NIC) configuration file containing a downloadable software control program; and

a network interface card for coupling said processing system to a data network, said network interface card comprising:

an apparatus for controlling a physical layer interface of said network interface card, said apparatus comprising:

a read only memory (ROM) capable of storing an embedded control program (see col. 9 lines 31-40 and col. 28 lines 55-65);

a random access memory capable of storing a downloadable software control program (see col. 9 lines 31-40 and col. 28 lines 55-65); and

a microcontroller capable of controlling said physical layer interface, wherein said microcontroller in a first operating mode executes said embedded control program to thereby control said physical layer interface, and wherein said microcontroller in a second operating mode is capable of downloading said downloadable software control program from an external processing system and executing said software control program in place of said embedded control program to thereby control said physical layer interface (see col. 4 lines 34-60 and col. 5 lines 1-5).

As to claim 17, Rostoker teaches a physical layer interface controllable by a microcontroller embedded therein, a method of operating the microcontroller comprising the steps of:

in a first operating mode, executing an embedded control program stored in a read only memory (ROM) coupled to the microcontroller to thereby control the physical layer interface (see col. 4 lines 34-60 and col. 5 lines 1-5);

in a second operating mode, downloading a software control program from an external processing system and storing the software control program in a random access memory (RAM)

Art Unit: 2157

coupled to the microcontroller and, in response to the step of downloading the software control program, executing the software control program in place of the embedded control program to thereby control the physical layer interface (see col. 4 lines 34-60 and col. 5 lines 1-5).

3. Claims 10-16 and 18-23 do not add or define any additional limitation over claims 1-9 and therefore are rejected for similar reasons.

4. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure.

- Network Control Device Enabling Communication Between First And Second Networks Utilizing Mode Switching For Downloading A Communication Program To The Second Network by Tanaka et al., U.S. Patent No. 6,640,254.

5. Any inquiry concerning this communication or earlier communications from the examiner should be directed to Hussein A El-chanti whose telephone number is (703)305-4652. The examiner can normally be reached on Mon-Fri 8:30-5:00.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Ario Etienne can be reached on (703)308-7562. The fax phone number for the organization where this application or proceeding is assigned is (703) 872-9306.

Any inquiry of a general nature or relating to the status of this application or proceeding should be directed to the receptionist whose telephone number is (703)305-3900.

Hussein El-chanti
